

# TRACT

TORONTO RIDE ACCESSIBLE COMMUNITY TRANSPORTATION

## Transportation Request

Tract is able to work with a number of types of requests. Clients calling in for transportation to their appointments make these requests.

- Allows you to place important information about the clients ride request
- At the bottom of the screen it will give you the Client profile information, based on this information you can decide what vehicle and driver you would like to send out
- You can schedule this transportation request using the ride planner or the scheduler
- Calculates the distance between pick up and destination and can create a return request for the initial ride

The screenshot displays the 'Transportation Requests' window with two tabs: 'Request' and 'Request Details'. The 'Request' tab is active, showing the following fields:

Request Id	1	Customer id	12	Customer Name	Nicole Hendricks
